

SEQUENTIAL COMPRESSION

# Flowtron Active Compression System Tri Pulse garments

Sequential garment range for effective DVT prevention, designed for optimal anatomical fit and enhanced patient comfort.

Featuring  
SmartSense™  
automatic garment  
recognition  
technology

# Compliance begins with comfort

With comfortable premium fabrics making the patient more inclined to wear the garments during therapy, Flowtron® addresses the core challenge of comfort in VTE prevention. Proven comfortable, *Flowtron* garments promote effective prevention and improved patient outcomes.<sup>1-3</sup>

## The challenge

The use of IPC as a prophylactic method requires the patient to wear garments continuously over time. This is vital to the success of IPC in reducing the risk of VTE in the hospital environment. Guidelines recommend therapy for a minimum of 18 hours per day, until the patient is fully mobile or no longer determined to be at risk. Mechanical prophylaxis has been suggested for as long as 10-14 days post-operatively for patients undergoing major orthopedic surgery.<sup>4,5</sup>

Patients may remove sleeves if they are uncomfortable, particularly if they make the skin feel too hot, sweaty or itchy, or if the sleeves in other ways irritate the skin. Patient discomfort may increase the need for caregivers to perform manual checks and refit sleeves to non-compliant patients that otherwise risk missing out on therapy.

## Clinical relevance

Increasing emphasis has been placed on the comfort of VTE garments in improving wear time which is linked with reduced VTE event rates.<sup>2</sup>

A randomized, controlled trial evaluating patient compliance with IPC therapy, demonstrated that a garment which was more comfortable was worn for longer periods.<sup>3</sup>

Soft and breathable inner fabric transfers heat and moisture away from the skin through micro vents

Cushioning interior fibers designed to aid patient comfort

Simple and robust hook-and-loop closures that helps keep the garment secure

Lightweight mesh outer fabric helps prevent the build-up of heat to keep the patient cool and dry

# Sequential Tri Pulse garments

Advanced airflow light fabric keeps the skin cool and dry by preventing heat and moisture build-up<sup>6</sup>

Tri Pulse<sup>®</sup> garment designed to follow the natural curve of the leg, with patented wing-shaped bladder wrapping around the calf

Simple and robust hook-and-loop closures helping to promote effective therapy by providing a secure and snug fit

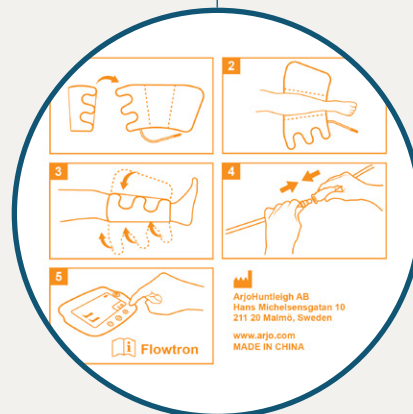

Single air inlet tube positioned anteriorly on the leg away from the bony prominence, designed to help reduce the risk of pressure injuries and to promote safety with less tubing around the patient

Sequential garment range designed for optimal anatomical fit and enhanced patient comfort

Clear visual instructions printed on the garment for ease of use and safety in application<sup>7</sup>

# USER-FRIENDLY GARMENT PACKAGING WITH LESS WASTE THROUGHOUT THE PRODUCT LIFE CYCLE

- New manufacturing and packaging process**  
 Less material use and reduced scrap in garment manufacturing and packaging
- New polybag material**  
 Higher quality, fully recyclable and easier to open
- User instructions printed on polybag/ Application guide printed on garment**  
 Improved legibility, ease of use and safety
- Elimination of paper format IFU**  
 Preservation of our environment and forests by less paper waste

At Arjo, we are committed to improving the everyday lives of people affected by reduced mobility and age-related health challenges. With products and solutions that ensure ergonomic patient handling, personal hygiene, disinfection, diagnostics, and the effective prevention of pressure injuries and venous thromboembolism, we help professionals across care environments to continually raise the standard of safe and dignified care. Everything we do, we do with people in mind. [www.arjo.us](http://www.arjo.us)
